

Environmental policy

Sacci Ryggsäckar AB has a responsibility towards the environment, as well as towards customers, employees, owners and other stakeholders. We shall reduce the impact on the environment as far as it is technically possible and economically reasonable.

In the development, production and sales of our own sustainable storage and carrying systems, we shall:

- At a minimum comply with the laws and requirements imposed on us
- Economise with raw and other materials as well as with energy
- Have a well-functioning waste sorting and recycling scheme
- Work with the environment in mind towards customers, clients and suppliers
- Reduce our overall environmental impact through continuous improvements
- Work preventively with risks/opportunities to reduce pollution
- Think long-term and sustainable at all levels by applying a life-cycle perspective to prevent the environmental impact from accidentally affecting another part of the life-cycle.

Quality policy

Sacci Ryggsäckar AB's policy is to develop, produce and market products and services of such quality that our customers' expectations are fully met. Our products should in all situations be perceived as worth their price and create added value for the customer and for ourselves.

We shall meet the customer's conscious and subconscious requirements and wishes, thereby building and maintaining good relations, which is a guarantee of a long-term and profitable relationship with the customers.

Satisfied customers create good conditions for a pleasant and efficient work climate. All employees should feel that they are an important link in the process and feel pride in our products that must be correct and of consistent high quality.

We shall nurture our good reputation and long-standing tradition of manufacturing and selling high-quality carrying equipment, thereby creating conditions for our long-term survival, as well as for the commitment we show in our work and in our attitude towards quality during every step of the way.

We shall fulfil the requirements we are affected by and work actively with continuous improvements.
